OVERVIEW

By taking several readings a day for each animal and providing you with an average weight at any point during the day or night puts you in greater control. This enables you to ensure optimal weight for your cattle, while at the same time reducing labour and waste bedding and feed from keeping cattle too long.

BENEFITS

- Easy to set-up and use
- Reduced wastage of feed and bedding
- Reduced labour input
- Improved accuracy of weight at finishing
- Optimal weight of cattle at slaughter

Lets break down the costs,
where can you save?

SAVINGS

Take a look at how the BM3000 will [see product](#) maximise your margins.

01

Operators

There is no need for putting animals through a crate for weighing. No operators needed.

02

Less Handling

Did you know after handling it can take up to a week before animals gain weight again?

03

Finishing

With individual animal information at your finger tips - finish at the right time. No missed weight or extra feed/bedding.
