

Precision Beef Monitoring

BEEF MONITOR

Using compatible ear tags, the Ritchie Beef Monitor records the weight and ear tag data every time the cattle walk across the unit to access water. The average LWG allows progressive farmers to ensure that their cattle are at optimum weights when sent to the abattoir. Reducing the risk of receiving over-weight penalties whilst ensuring the cattle are at their premium weight.

ABOUT

The Ritchie Beef Monitor is a weigh unit with a difference. The unit allows cattle to be weighed multiple times a day without the use of labour and without moving cattle from their pen. A huge reduction in stress for both stockman and stock.

Save time and money with reduced labour and higher accuracy of finishing cattle live weight gains.

Benefits

- Optimal weight of cattle at slaughter
- Reduced labour input
- Reduced feed and bedding costs
- Early indication of pen or performance issues

Features

- Easy to set up
- EID tag reading, weighing and recording
- Cloud based data management*
- Monitor cattle weight performance 24/7
- Tipping water trough

BM3000
RRP £7,791

Optional Extras

- Solar panel pack for use in the field
